Abstract (en)  
[origin: WO2016045958A1] The present invention relates to an implant, preferably a dental implant, comprising an implant body and a distraction membrane, to the use of said implant for callus distraction and to an implanting method. The implant has a connecting mechanism for connecting and moving the distraction membrane along the implant body, said implant body having, at its distal end, an opening from which a recess in the implant body extends in the direction of the apical end, the connecting mechanism being slidably mounted in the recess of the implant body.
