Abstract (en)  
[origin: WO2016046011A2] The invention relates to a clutch arrangement comprising: a first driving part 7, 107, a second driving part 9, 109, a clutch 3, 103 having an axially supported first clutch part 6, 106 and an axially movable second clutch part 8, 108, wherein the second clutch part 8, 108 can be moved into an open position and into a closed position, wherein a clutch profile 10, 110 of the second clutch part 8 and a driving part profile 20, 120 of the second driving part 9, 109 form a positive profiled connection 29, 129 in such a way that the second clutch part 8, 108 is connected to the second driving part 9, 109 in a rotationally fixed and axially movable manner, wherein the driving part profile 20, 120 comprises medium tooth traces L20, L20', which each are arranged between a head line Z20, Z120 and a foot line F20, F120 of the driving part profile 20, 120, the driving part profile 20, 120 being designed in such a manner that the medium tooth traces L20, L20' define a surface of rotation when rotating about the axis of rotation A, said surface of rotation having at least a tapered partial section. The invention further relates to a drive train arrangement having such a clutch arrangement.
