Abstract (en)
[origin: WO2016045971A1] The invention relates to a fan wheel, in particular for propelling cooling air for an internal combustion engine, comprising a hub (2) on which a plurality of fan blades (3, 6, 9, 12) is arranged and which includes a rib structure that extends peripherally and consists of substantially rectangular and flat ribs (5, 8, 11, 14) having an edge region; said ribs sit on the hub by the edge regions thereof and have a longitudinal direction that extends substantially tangentially to the circumferential direction of the hub (2), the ribs being in contact with one another.
