Abstract (en)

[origin: WO2016046250A1] The invention relates to an arrangement (1) for a temperature control device (15) and to a method for producing such an arrangement (15). The arrangement (1) has a tube body (2) and a component (3), wherein a connection section (7) of the tube body (2) is arranged in an opening (6) of the component (3) and the tube body (2) is held by the component (3). A simple, cost-effective, and flexible producing of the arrangement (1) results in that the tube body (2) in the connection section (7) and/or the component (3) in the region of the opening (6) have a plastic layer (8) for sealing the opening (6). The invention further relates to a modular system (14) having such an arrangement (1) and an additional component (17) for producing a temperature control device (15). The invention further relates to such a temperature control device (15) which is in particular designed as a heat exchanger (19).
