Abstract (en)  
A ski boot 1 comprising a release element 2 for releasable attachment of the ski boot 1 to a ski 7, the release element 2 being moveable from a first engaged position in which the release element 2 is capable of retaining the ski 7 on the ski boot 1, and a second released position in which the ski 7 is released from the ski boot 1, in response to a load exceeding a threshold load applied between the ski boot 1 and a ski 7. Control means 5 is provided for adjusting the threshold load at which the release element 2 moves from the first position to the second position, the control means 5 adjusting the threshold load to release the ski boot 1 from the ski 7 dependent on the speed of the ski boot 1. A speed detector 10 is used to determine the speed of the ski boot 1.
