Abstract (en)  
With the present invention, there is provided a basket system (S) suitable for use in household appliances (G) such as dishwashers, and comprising at least one body (1) wherein the dishes are cleaned; at least one washing apparatus (1a) positioned on the body (1) and transferring the washing liquid onto the dishes; at least one basket (2) positioned on the body (1) and consisted of at least two wires (2a), and on which the dishes are placed that are desired to be cleaned; at least one movement member (2c) that moves the basket (2) inside the body (1). The basket system (S) comprises at least one basket bottom (2b) on which the basket (2) is detachably placed, and at least one bend (2d), which is provided on the basket bottom (2b), which prevents the basket (2) from moving in the movement direction of the basket bottom (2b), independent from the basket bottom (2b), when the basket (2) is placed on the said basket bottom (2b), and which is interposed between the wires (2a) of the basket (2).
