Abstract (en)  
[origin: EP3199718A1] A flat-roof skylight window comprising a window portion and a separate weather shield, wherein the weather shield comprises a weather shield pane, which is curved outwardly in relation to the window portion, the weather shield pane comprising two opposed substantially straight peripheral edges and two opposed curved peripheral edges, the weather shield pane further comprising a curved bottom surface facing the window portion and having four bottom corners positioned in an imaginary bottom plane (P1), an apex line or peak line (X) extending between said two curved edges where the bottom surface of the weather shield pane has the largest distance to the bottom plane (P1), a connecting line (L1) connecting two of said bottom corners, the connecting line (L1) extending substantially in parallel to the apex line (X), the apex line (X) and the connecting line (L1) being positioned in an imaginary inclination plane (P2), wherein an angle between the bottom plane (P1) and the inclination plane (P2) is between 1 and 10 degrees. A weather shield for being mounted on the window portion for forming a flat-roof skylight window according to the above.
