Abstract (en)
[origin: WO2008138437A1] The invention relates to a furniture fitting having a housing in which an actuating element can be displaced against the initial tension of a spring element, wherein a tappet is connected, or can be connected, to the actuating element, wherein the tappet has an adjusting section that can be adjusted between a maximum and a minimum adjustment position provided relative to the housing. In order to improve operating safety, particularly child safety, the invention provides for the tappet to be held in a captive fashion in the maximum adjustment position by means of a stop connection.
