Abstract (en)

[origin: EP3200043A1] A watch type terminal includes: a haptic module including a plurality of vibration elements and configured to generate a tactile effect that is sensible by a user of the watch type terminal; and a controller configured to acquire event information on the watch type terminal and controls one or more vibration elements among the plurality of vibration elements to operate in a vibration alarm pattern corresponding to the acquired event information. The watch type terminal acquires event information and operates one or more vibration elements among the plurality of vibration elements in a vibration alarm pattern corresponding to the acquired event information.
