Abstract (en)

[origin: WO2017060123A1] The invention relates to an identification feature for identifying an object, having a random structure formed of pigments of a colorant or of particles of at least one dye, wherein the random structure is configured as an integral part of a printing ink or an ink. The printing ink or the ink is arranged as a raster graphic consisting of a plurality of pixels at or on the surface of the object to be identified, wherein the pigments of the colorant or particles of the at least one dye forming the random structure form a planar structure comprising a plurality of adjacent pixels of the raster graphic.
