Abstract (en)

[origin: WO2016050624A1] The present invention relates to a luminous device of a motor vehicle, which includes: a housing (50) closed by a transparent glass closure plate (54); an electronic board (21) inside the housing and connected, or intended for being connected, to a light source, the electronic board having a positioning cut-out (24), the housing having at least one positioning portion (60) arranged with said positioning cut-out such that the electronic board is positioned relative to the housing by engaging said positioning portion and said positioning cut-out.
