Abstract (en)  
[origin: WO2016050449A1] A refrigeration device has a storage area (3) which is delimited by a body (1) and a door (2) and which is subdivided by a shelf (4) into an upper and a lower compartment (5, 6). A drawer (9) is accommodated in the lower compartment (6). In a stop position of the drawer (9) in which it is pushed into the lower compartment (6), a front wall (11) of the drawer (9) bears against a front edge of the shelf (4). A closure element can be moved across a passage (21) in the shelf (4) between a position which blocks the passage (21) and a position which opens the passage (21) over at least part (33) of its cross section.
