Abstract (en)

[origin: WO2016051091A1] A mobile radio antenna for a small receiver. The invention concerns a system comprising a terminal (1) and a cable (2). The terminal (1) comprises: a data transceiver module (WIFI) for data to be played back on a playback device (3), said data being received or transmitted by at least one antenna (26, 26a, 26b, 76); a connection module (HDMI, MHL) for connection to the playback device (3) via a communication medium (7,8) capable of exchanging data with the playback device; a connection module (USB, MHL) for connection to a power supply device via a power supply medium (25) capable of transporting an electric power supply, the cable (2,7) comprising the communication medium (7) and/or power supply medium (2); a connector (4) for connecting same to the terminal, the system being characterised in that the cable further comprises said antenna (26) and in that the antenna is electrically separate from the connector (5,8).
