Abstract (en)  
[origin: CN107019471A] A steam cleaner comprising: suction means; a main suction duct (10) connected to the suction means; a suction nozzle with a base plate including a front suction slot (14), a rear suction slot (15), and a steam diffuser (21) arranged between the front suction slot (14) and the rear suction slot (15); and a secondary air circuit with a first branch (11) and a second branch (12), the first branch (11) is connected to the main suction duct (10) and the front suction slot (14), the second branch (12) is connected to the main suction duct (10) and the rear suction slot (15), each of the first branch (11) and the second branch (12) comprises a plurality of airflow passing sections, and each of the airflow passing sections is defined by a surface. The steam cleaner is characterized in that the second branch (12) comprises at least one passing section whose area is less than or equal to half the area of the smallest passing section of the passing sections of the first branch (11).
