Abstract (en)
A scooter for kids, including a scooter head and a main body connected to the scooter head. A rotating and positioning mechanism is disposed between the scooter head and the main body. The rotating and positioning mechanism includes a front body and a rear body. The front body is integrated with the rear body via a fixer to form a rotatable body. The back surface of the rear body is provided with a socket, and a connection rod was disposed in the socket. The outer end of the connection rod is provided with a first button. The connection rod is sheathed with a first spring, and the first spring is disposed in the socket.
