Abstract (en)
A container (100) folded from sheet (1) is provided in the invention. A plurality of side planes (20, 30, 40, 50) are connected in a row to a bottom plane (10) and form the container (100) with the bottom plane (10). At least two engagement pieces (25, 45) are extended from sides of at least two non-adjacent side planes (20, 40) for coupling to each other with their engaging portions (251, 252, 451, 452) at both ends when the plurality of side planes (20, 30, 40, 50) are folded toward a same side of the bottom plane (10), so as to maintain the bottom plane (10) and the side planes (20, 30, 40, 50) in shape of the container (100). Handle pieces (35, 55) extended from the other side planes (30, 50) have hooks (352, 354, 552, 554) cut and folded therefrom to further couple to openings (255, 256, 455, 456) of corresponding engaging portions (251, 252, 451, 452) so that the two engaging portions (251, 252, 451, 452) coupling with each other may further be tightly clipped from outside the container (100) toward the side plane and a convenient container (100) with specific containing room may be provided therefrom.
