Abstract (en)
[origin: WO2016055179A1] The invention relates to a device (10) for applying a viscous material, comprising an application tube (16) which has a material inlet opening (18) on a first end (20) and a material outlet opening (24) on a second end (26), which defines an application channel (14), and which is flexible at least over one portion of its length, and comprising a housing (12) which accommodates the application tube (16), and which has a material supply connection (28) for the viscous material to the application tube (16), wherein the application tube (16) is connected to the housing (12) in an initial region (30) coming from the material inlet opening (18), and is arranged at a distance to the housing (12) in an end region (32) extending to the material outlet opening (24), and wherein a bearing section (48) of the end region (32) is mounted near to the material outlet opening (24) in a motor-driven eccentric (50) that can rotate about the longitudinal central axis (46). According to the invention, an adjustment mechanism is provided for adjusting the distance of the bearing section (48) to the longitudinal central axis (46).
