Abstract (en)

[origin: WO2016055202A1] The invention relates to an accelerator pedal with haptic signaling, in particular for a motor vehicle. The accelerator pedal (100) has a pedal arm (300) and a step plate (200). The accelerator pedal (100) has a signaling arrangement (500) for generating a haptic signal. The aim of the invention is to allow a robust and inexpensive design which is as simple as possible and which can simultaneously generate a particularly effective haptic signal. This is achieved in that the step plate (200) is movably arranged on the pedal arm (300), and the signaling arrangement (500) is arranged such that the haptic signal can be transmitted directly from the signaling arrangement (500) to the step plate (200).
