Abstract (en)

[origin: WO2016053208A1] A floating unit capable of attaching to another floating unit by locks for assembling a floating structure according to this invention comprises a floating body being in the form of a hollow polygonal shape as viewed from a plan view. The floating body comprises an upper surface, a lower surface, and a plurality of lateral surfaces connected to said upper and lower surfaces. Said upper surface and said lower surfaces of the floating body comprise at least one upper engaging surface and at least one lower engaging surface respectively on each associated side of said polygonal floating body, wherein the upper and lower engaging surfaces are respectively adapted in order to be fitted with a locking surface of said lock, therefore, said floating body can be attached to a floating body of another floating unit.
