Abstract (en)
[origin: WO2016055207A1] The invention relates to a submarine comprising a plurality of weapon barrels guided through the pressure body of the submarine on the bow side, at least one of said weapon barrels being located above the water surface during surface cruising by the submarine. Said submarine has a magazine within the pressure body, which magazine can be positioned in front of the weapon barrels, and which has a plurality of receptacles, each of which is designed to receive a weapon. The magazine is moveable in such a way that each of the receptacles of the magazine can be positioned in longitudinal alignment with the weapon barrel, and can also be moved into a position in which the magazine is arranged outside of a clearance zone spanned by the weapon barrels.
