Abstract (en)

[origin: WO2016055713A1] The invention relates to a supporting structure (1) for loading goods onto a storage and/or transport pallet (13), formed by assembling removable elements, including a lower plate (2) for loading said goods, an upper plate (4), and a plurality of pillars (3), in the form of corner-type profile members, the ends of which are provided with plates arranged transversely to the pillars, the lower plate forming a foot of the pillar, the lower (2) and upper (4) plates comprising areas for receiving the lower plates (6) and the upper plates (7) of said pillars (3), respectively, the assembly of the plates and the pillars constituting the outer framework for loading the goods, said framework being suitable for being positioned entirely above the upper surface of the pallet (13). The invention also relates to a method for loading a pallet by means of said structure.
