Abstract (en)

[origin: WO2016055458A1] The invention relates to a method for mounting a heat exchanger device (16) of a refrigerating plant (10), wherein the heat exchanger device (16) comprises the following components: a housing (34), which has at least one cover (36) and a tubular shell (38), a heat exchanger coil (42), and a coolant collection container (32). Essential according to the invention is that the heat exchanger coil (42) is pushed over the coolant collection container (32) and fluidically connected to the at least one cover (36), that the tubular shell (38) is pushed over the heat exchanger coil (42), and that the tubular shell (38) is deformed radially inward. The invention further relates to a heat exchanger device (16) of a refrigerating plant (10) produced according to said method.
