Abstract (en)

The invention relates to a catch for catching a locking element, wherein the catch comprises a catch body to catch the locking element in a receiving space in a catching direction and a correction member that extends in the receiving space to correct a misalignment between the catch and the locking element, wherein the correction member is moveable in a correcting direction between a first position and a second position, wherein the catch comprises a fixing member which is adjustable between a first state, in which it fixes the position of the correction member with respect to the catch body, and a second state, in which it allows repositioning of the correction member between the first and second position, wherein the correction member is moveable to a third position in which the correction member extends obliquely to the longitudinal direction.
