Abstract (en)

[origin: US2017234604A1] A domestic appliance apparatus, in particular a domestic refrigeration appliance apparatus, has at least one storage unit and at least one retaining unit. The retaining unit has at least one vertical rail element and at least one retaining element connected to the rail element and retaining the storage unit. In order to provide a generic apparatus with improved characteristics in respect of an advantageous mounting of storage units, the retaining element is supported on the rail element in such a manner that its height can be adjusted in an at least essentially vertical direction.
