Abstract (en)
[origin: WO2016050227A1] The invention relates to a method for application of a cosmetic composition in the form of a (hydro)gel or a cream containing at least one active substance, in which this cosmetic composition (3) is applied on the skin (1) at the site (2) of desired action, whereupon it is at least partially overlaid by a barrier layer (4), which contains polymeric nanofibers made of or containing as one of its components at least one biocompatible polymer and/or its copolymer and/or at least one biopolymer and/or its derivative, and/or prior to being applied on the skin (1), the cosmetic composition (3) is applied on the surface of such a barrier layer (4), which is subsequently put with its surface with applied cosmetic composition (3) on the skin (1), by which means the cosmetic composition (3) and the site (2) of desired action of its active substance/substances are closed against external influences, but remain accessible to atmospheric oxygen. The invention also relates to a means for the application of the cosmetic composition (3) containing at least one active substance, the means containing the cosmetic composition (3) applied on a barrier layer (4), which contains polymeric nanofibers made of or containing as one of its components at least one biocompatible polymer and/or its copolymer and/or at least one biopolymer and/or its derivative.
