Abstract (en)
[origin: WO2016058859A1] The invention relates to a press (1) comprising: at least one press ram (2) by means of which a press stroke (h) can be carried out when the press (1) is actuated; at least one first working station (10) and a second working station (20), wherein the first and the second working station (10, 20) each has a tool lower part (12, 22) and a tool upper part (14, 24), wherein a first forming stage (16) is formed by means of the tool lower part (12) and the tool upper part (14) of the first working station (10), and a second forming stage (26) is formed by means of the tool lower part (22) and the tool upper part (24) of the second working station (20); and a mechanical element (30) for transmitting the press stroke (h) to one of the first or second forming stages (16, 26), wherein the press stroke (h) can be transmitted to the first and the second forming stages (16, 26) independently from one another.
