Abstract (en)  
[origin: WO2016061324A1] A safety razor 10 includes a handle 12 and a razor cartridge 14, 20. The handle has an extension 30 that mates with a recess 50 of the razor cartridge. The extension defines an axis 32 along which the razor cartridge is moveable during connection to, and disconnection from, the extension. The extension has a pair of depressions 34 arranged symmetrically about the axis and each adapted to snap-fittingly receive one of two detents 56, 58 of the razor cartridge. The two detents are asymmetric relative to the axis when the razor cartridge is connected to the handle such that, when a user operates an ejector 40 to disconnect the razor cartridge from the extension, a first 56 of the two detents engages an edge 36 of the respective depression before a second 58 of the two detents engages an edge 36 of the respective depression.
