Abstract (en)  
[origin: WO2016058756A1] The invention relates to a running carriage (10) for a window, a door, or the like, for sliding a sliding sash parallel to the plane of a fixed frame of the window, the door, or the like. For this purpose, the running carriage (10) has a rolling part (12) comprising a first running roller (16). The running carriage (10), furthermore, has a roller bearing (34) in order to be able to adjust the sliding sash which can be fastened to the sash retaining part (14) of the running carriage (10) transverse to the plane of the fixed frame, in particular perpendicular to the plane of the fixed frame. The roller bearing (34) is arranged preferably between two slot sections of a guide slot of the rolling part (12) for a compact design of the running carriage (10).
