Abstract (en)

[origin: WO2016058724A1] The invention concerns a device for compensating for the operating clearances of an engine comprising a transmission device (1) likely to move transversely in an engine block (100) during an engine cycle; a pressing device (10) exerting a holding force on the transmission device (1). According to the invention, the holding force is adjusted to the instantaneous speed of transverse movement of the transmission device (1) in the engine block (100).
