Abstract (en)
[origin: WO2016062870A1] The invention concerns the maritime field and relates to a system for launching and recovering (1) a marine or submarine device (7) from a support vessel (6), the system comprising a carriage (2) and at least one protective component (5). The invention is characterized in that each protective component (5) is connected to the carriage (2) by a pivot connection of which the axis, when the launch and recovery device is secured to the vessel (6), is parallel to the surface of the water (25); and in that at least one protective component (5) is suitable for raising the marine or submarine device (7) partially out of the water during recovery and for placing the marine or submarine device (7) in the water during a launch, by rotation of the protective component(s) (5) about the carriage (2).
