Abstract (en)

[origin: WO2016062437A1] The invention relates to a system (1) for compensating for a movement of an element hooked onto movable equipment, said system (1) including two pulley blocks (2, 3), at least two hinged arms (4), a compensation cylinder (5) and a cable (10). At least one characteristic length (A, B, C, G) of the hinged system (for example, the length of a link or the distance between two pulleys of two hinged arms) is adjusted depending on the movement to be compensated.
