Abstract (en)

[origin: CA2975424A1] The invention relates to a drive device (100) for an electrical switching device (10), in particular for a high-voltage switch, having a housing (102) which can be filled with insulating gas, having an energy storage device which is arranged in the housing (102) and has a spring (108) and a stop (112a) against which the spring (108) can be tensioned. According to the invention, an adjustment device (114) which can be actuated from the exterior of the housing (102) is provided, by means of which adjustment device (114) a position of the stop (112a) in the housing (102) can be adjusted along an axis (x).
