Abstract (en)  
[origin: WO2016062809A1] The invention relates to an electronic assembly having a plurality of electronic modules (2) arranged adjacent to each other, wherein the individual electronic modules (2) each comprise a base housing (3), at least two conductor connection elements (4), an electronic component, in particular a relay (5), that can be attached to the base housing (3) from a first side (3a), and a retaining and ejecting bow (6) for the electronic component, which retaining and ejecting bow is pivotably arranged on the base housing (3). The electronic assembly is especially easy to operate and to assemble in that an adapter module (7) is provided, which has an adapter housing (8), a number of plug contacts (9) corresponding to the number of electronic modules (2), and at least one interface (10) for connecting a cable, in that the individual electronic modules (2) have counter contacts (11), which correspond to the plug contacts (9) and are accessible from the first side (3a), and in that the adapter module (7) has at least one pivotably supported ejecting lever (12), which can be pivoted from a first position to a second position.
