Abstract (en)  
[origin: WO2016040972A1] The invention relates to a motor vehicle exterior light (1), in particular for the emission of light in the direction of a section of the path of the motor vehicle, comprising a supporting structure (7), a plurality of lighting means, and a covering pane (2) that is transparent, at least in some sections. The lighting means are arranged on the supporting structure (7), and, furthermore, the covering pane (2) has an inner side (9) facing the lighting means (4). The supporting structure (7) is formed by an elastically restorable film material, wherein electrically conductive structures (12) are arranged on the supporting structure (7), and wherein the lighting means (4) are arranged directly on the supporting structure (7) by means of a connecting material (13) that can be hardened, making contact with the electrically conductive structures (12). The supporting structure (7) is arranged on the inner side (9) of the covering pane (2).
