Abstract (en)

[origin: WO2017144704A1] The invention relates to a band clasp, particularly a wristwatch band clasp, including a device for finely adjusting the length of the band. In one embodiment, the invention relates to a folding clasp, and the adjustment device is placed on a strip to be inserted between two vertical members of a main strip when the clasp is closed. The adjustment device comprises a locking shaft, arranged in a direction orthogonal to the longitudinal direction of the clasp and placed therein such that at least part of the shaft is placed above a top surface common to the strips of the clasp. In one embodiment, the movable portion of the adjustment device is pivotally mounted on the clasp.
