Abstract (en)
[origin: US2017246484A1] A fairground ride may include a support structure, at least one vehicle having a passenger receptacle, and at least one guideway which is attached to the support structure and forms a circuit, wherein the guideway is adapted to guide the vehicle along the circuit. The fairground ride may also include at least one drive member which is adapted to move the vehicle along the circuit; and at least one recovery apparatus, which has an operating range. The guideway may be disposed at least section-wise on a substantially vertical area, each point of the normal vector of which is perpendicular to the vertical axis of the support structure, and the operating range of the recovery apparatus may substantially cover the vertical area.
