Abstract (en)
[origin: WO2016066337A1] The invention relates to a strand-guiding rolling unit (33, 33a) for guiding a metal strand in a continuous casting machine (2), having a strand-guiding roller (26), which can be placed individually against the strand, a roller carrier (28, 28a), an adjusting device (30) and a crosshead (32, 32a), wherein the individually placeable strand-guiding roller (26) is connected to the roller carrier (28, 28a) and the adjusting device (30) is connected at one end to the roller carrier (28, 28a) and at the other end to the crosshead (32, 32a), and also having a strand-guiding segment (101) and a strand guide (8). A particularly advantageous strand-guiding rolling unit (33, 33a) is achieved if the adjusting device (30) is connected to the crosshead (32, 32a) or to the roller carrier (28, 28a) in a translationally and rotationally movable manner by means of at least one mounting (43).
