Abstract (en)

[origin: WO2016083188A1] The invention relates to installation tools (60), which are matched to a wire thread insert (1) that comprises: a cylindrical coil (20), which has a plurality of helically wound turns (30) of a wire; and a driver pin (50), which protrudes into an interior of the coil by means of a bending region (40) and which has a driver notch (42). The installation tool (60) has the following features: a rotatable installation spindle (62) having a drive end (64) for rotating the installation spindle and a function end (70) for installing the wire thread insert (1), wherein the function end comprises at least one thread turn that is length-reduced in the circumferential direction and that has, at a first end, a driver edge for engaging in a driver notch of the wire thread insert and, at a second end, a bend-open shoulder for bending the driver pin (50) of the wire thread insert radially outward.
