Abstract (en)

[origin: WO2016066989A1] A method of manufacturing a pack of smoking articles. The method comprises providing a planar blank of an inner support frame comprising a front panel and a rear panel connected by a bottom panel, and folding the front and rear panels together about the bottom panel to form an inner support frame in a receiving configuration. In the receiving configuration, the front and rear panels diverge in a direction away from the bottom panel and define an opening remote from the bottom panel. The method includes inserting a bundle of smoking articles through the opening into the inner support frame and folding the front and rear panels together about the bottom panel from the receiving configuration to an enclosed configuration to enclose the bundle of smoking articles. The method includes wrapping the bundle of smoking articles and inner support frame with a film to form a sealed pack of smoking articles. Also an apparatus for manufacturing a pack of smoking articles according to such a method.
