Abstract (en)
[origin: WO2016066398A1] P42697PC00 18 Abstract. The invention relates to a plastic container (1) which comprises a container body (2) and a container neck (4) that has a container mouth (5) able to be closed by means of a sealing film. Said container mouth (5) is bordered by a mouth surface (8) which extends circumferentially to form a closed circle and extends inwards from an outer surface (9) of said container neck (3) to a mouth edge (7). On said mouth surface (8), two or more weld ribs (10, 10') are arranged which extend circumferentially in a closed circle, protrude substantially axially out of the mouth surface (8), are radially spaced apart from one another, and are produced by means of a blow-moulding method.
