Abstract (en)

[origin: WO2016066924A1] The invention relates to bundles 2 made up of a plurality of sheet components 3 in which one surface 3a has abrasive grains 4 and in which the sheets of the bundle are joined together by a casing. The subject matter of the invention is that of reducing the cost of packaging the bundle without generating unusable waste. For this purpose, the casing for holding the components 3 of the bundle is made up of the abrasive sheet 5 forming the bottom of the bundle, said sheet having at least one dimension that is larger than that of the other components, in order for the portions 5a and 5b thereof to form flaps which, after folding onto the components 3 of the bundle, expose the central portion of the bundle and leave in view the surface that is not provided with abrasive grains, said surface including indications of the composition, the destination, the size of the grains or the specific use of the sheets of the bundle.
