Abstract (en)  
[origin: WO2017063952A1] The invention relates to a gantry lifting device (1) for ISO containers (2), in particular in the manner of a straddle carrier, comprising four gantry supports (6d) which are spaced apart from one another, extend parallel to one another in the vertical direction, and are connected to one another at the upper ends of the gantry supports by means of an upper frame (8), and comprising a machine platform (11) arranged between the gantry supports (6d), wherein the machine platform (11) is mounted such that the machine platform can be raised and lowered. In order to provide an improved gantry lifting device (1), according to the invention the machine platform (11) can be moved in the vertical direction between the gantry supports (6d) and below the upper frame (8) relative to the upper frame (8).
