Abstract (en)

[origin: WO2016066928A1] The invention relates to a multi-module motor vehicle headlight comprising moving mirrors actuated by a single motor. The headlight (11) is of the multi-module type and each module (11 a, 11b) constituting said headlight (11) comprises at least one light source and at least one moving member for intercepting the beam (4a, 4b), capable, according to the position thereof, of intercepting or allowing the passage of a part of the light beam coming from the source, the intercepting members (4a, 4b) of at least two modules being actuated by a common movement means, the reflecting surfaces of the two modules being flat mirrors (4a, 4b), said flat mirrors (4a, 4b) being mounted on a common axis (5) and being rotatable around said common axis (5) which is orientated perpendicular to an optical axis.
