Abstract (en)
[origin: WO2016066489A1] The invention relates to a refrigeration appliance (100) comprising a coolant circuit with a condenser (117), a heat cycle system (105) for heating an element of the refrigeration appliance (100), said heat cycle system (105) comprising a heat conducting area (107), also comprising a heat exchanger element (153) which comprises the condenser (117) and the heat conducting area (107). Said condenser (117) and the heat conducting area (107) in the heat exchanger element (153) are thermally coupled in order to transfer heat from the coolant circuit to the heat conducting area (107) of the heat cycle system (105).
