Abstract (en)
[origin: WO2016066482A1] The invention also relates to a household appliance (1), in particular a refrigeration appliance (1a), comprising an electronic control device (14) which is designed to control at least one function of the household appliance (1) and which comprises an electronic control circuit (14a) and an input device (11) which is connected to said control circuit (14a), said input device comprising at least one input means (12) and being designed, based on a manual actuation of the input means (12), to transmit an associated control signal to the control circuit (14a). Said input device (11) comprises a flexible support (12b) on which said at least one input means (12) is arranged. Said input device (11) comprises a maintaining device (13) on which the flexible support (12b) is fixed in a tightened manner using at least one securing means (16) which are connected to the maintaining device (13) and which act upon in an interlocking and/or force-fit manner.
