Abstract (en)

[origin: WO2016066415A1] The present invention relates to a heating device (10) for air conditioning unit (1). It is characterized in that the heating device (10) comprises: - at least one module (11, 12) furnished with a resistive track (110, 120) and with a support (111, 121), said resistive track (110, 120) being adapted to be supplied with a current (i) delivered by a DC electrical supply source (2); - an inverter (13) adapted for: - being connected to said resistive track (10) and to said DC electrical supply source (2); - periodically modifying the direction of said current (i) supplying said resistive track (110, 120).
