Abstract (en)  
[origin: EP3214200A1] Provided is a high strength steel sheet capable of securing high strength before and even after PWHT is performed for a long period, for example, of 15 hours or more. The high strength steel sheet comprises a predetermined component composition, an estimated precipitation amount P 0 is 1.50 or more which is obtained from amounts of Nb, Mo and C, and a metallographic structure satisfies a proportion of ferrite: 60 area% or more; and bainite: 4 area% or more, relative to an entire structure,
