Abstract (en)

[origin: US2017254122A1] The invention relates to a motor vehicle door handle arrangement having a closing cylinder for actuating a door lock by means of a key, wherein the closing cylinder is fixed in its installation position by means of a securing element displaceable relative to the closing cylinder from a pre-mounting position into a mounting position, wherein the securing element is displaced from the pre-mounting position into the mounting position by means of at least one actuation screw engaging in a thread in the securing element.
