Abstract (en)
[origin: WO2016071639A1] The invention relates to a device (1) for transporting a passenger (V) from door to door, characterised in that it comprises: a platform (2) equipped with means for moving along the ground; at least one private seat (3) comprising a power source and connection means, said seat being secured to the platform; and a connected virtual reality unit (4) that can construct a virtual environment for the passenger. The invention also relates to a method for transporting a passenger using the device of the invention.
