Abstract (en)
[origin: WO2016071658A1] A protective enclosure for ammunition comprises a box (12) containing a first liner (6), within which the ammunition can be disposed in use, the first liner comprising a top panel (7), a bottom panel (8), and two opposed side panels (9 and 10) extending between the top and bottom panels, the top and side panels being formed of perforated steel, and a second liner (1) in which the first liner is located, the second liner (1) comprising a top panel (2), a bottom panel (3), and two opposed end panels (4 and 5) extending between the top and bottom panels, the top and end panels being formed of perforated steel and the second liner closely conforming with the first liner so as to close the ends thereof. A third liner may slidably engage over the second liner, the third liner comprising a top panel, a bottom panel, and two opposed side panels extending between the top and bottom panels, at least the top and side panels being formed of perforated steel.
